

GoLive^{TV}

At Mena Media, we're totally dedicated to TV Channels in MENA and out of MENA having access to a truly global and local fleet of satellites. That's why we've developed **GoLive**: a software solution that does exactly what it says it does.

GoLive can stream, distribute and play it - at the touch of a button.

Just equip yourself with an industry standard DVB encoder plus two LAN cards, check your internet upload rate, give us remote access to your server, and we're good to go.

Because we're geeky and nerdy - but only in your best interests, we've even taken care of the safety and security stuff. **GoLive** works automatically, kicking in when you boot up your server, re-connecting instantaneously if your internet drops, and re-transmitting packets if errors occur.

GoLive is our premier product, uniting all our other services. Use it as a stand-alone or in combination but, whatever else you do, give **GoLive** a go. **Contact sales for further information** sales@menamediauk.com
